

# Peel Kit

# 1

Make sure skin is clean and makeup free. Swab face with alcohol pad. Break open the vitamin E pre-loaded Q-tip and swab corners of nose and eyes for added protection.

Break open peel bottle and pour into 1oz cup. Put on glove. Tear open the 4x4 gauze and gently load peel solution onto gauze using gloved hand.

# 2

# 3

Gently rub gauze with peel solution onto skin in circular motion for one full pass. Wait 3 minutes and watch how skin reacts after first pass. If no white film or "frosting", pass again using similar motion. Do not pass more than twice. Leave on skin for up three minutes. Dispose of cup, gauze and remove glove.

Open Post Peel Care envelope. Remove paper sheets and moisten with water until foaming. Wash with foam to neutralize and remove peel. Skin will lightly sluff off over the next 3-7 days. Keep skin hydrated and protected with enclosed moisturizer and SPF.

# 4

For personal and clinical use only. May not be resold or distributed.
